ERC meeting July 23 2024

Should we take minutes? – sure but let's rotate.

Did Alban have homework? Can't remember (suggests we should take notes)

Alban wanted update on last meeting.
- Last meeting, we talked about statistical approaches with McElreath here. Had a follow-up meeting the day after to talk about the structure of models that might be used (the mechanistic models)

We need to do some preliminary work to see the distribution of land uses associated with our data. This is something that Alban was planning on doing. If we have a preliminary analysis of this then we can use a spot light to find more data.
- He will need input from Kim, Wubing and Minghua to make some progress about the land use types.
- Alban would like a meeting and will reach out to Wubing and Minghua since Kim is out of town.

Next meeting is canceled because a few of us will be at ESA and Martina will be gone.

Next meeting should be Aug 20 (Jon will be back).

Should we wait for Jon to be back? Might be worth working on data wrangling to prepare and get things together.

Martina wants to make contact with Zofia as part of the background prep.

Things to do/check
- Did you receive the GitHub invite from Alban for the project
- Set up a meeting to think about how Minghua's involvement in the project could be turned into a PhD project.
- Need some meetings to offboard Alban and make sure everyone (Kim and Shane) can use Alban's products related to the projects.
- Need to make sure teaching resources and other things are available .
